

Jinja Templating Resources

Jinja2 is a fast template engine for Python developed and supported by the Pocoo Team. It is the default template engine in flask, can be integrated in other frameworks such as Django, or can be used without a framework.

Here are some of the best Jinja resources on the web:

- [Google Chromium: Jinja Templating Style Guide](#): This is a great resource and you should definitely give it a read. This is an opinionated style guide for the Jinja templating DSL used by the Google Chromium project (the open-source version of Chrome).
- [Jinja Project—Tips & Tricks](#): A part of the official Jinja documentation. This shows you some actionable tips and tricks, as well as common pitfalls to avoid.
- [Stack Overflow: Questions Tagged "Jinja"](#): If you're looking for answers to specific Jinja coding issues I would recommend you search this list or post a new question directly to Stack Overflow.
- [Jinja FAQ](#): Another useful resource that answers some of the most common Jinja questions.
